Dear Ruth *Sager*

Enclosed are a couple of millipore filter sheets. They can be reesterilized briefly in the autoclave if wrapped sh they are under slight pressure and can't curl. You may have to improvise some sort of holder— you might get them into a Seitz holder or the like, but they should be well supported.

For further information, write the Lovell Chemical Company, Watertown 72, Mass. A German line of membrane filters, probably very similar, is also listed by Schlaicher & Schull,

Esther and I had a grand time in New York, thanks largely to the good care taken of us by you and the Zinders. Thanks very much.

Yours sincerely,

Joshua Lederberg
